

BAC ALLERGY-FREE (PROBIOTIC SPRAY)

Spray with probiotic

Bacteria save from allergy against dust mite

At least 10% of world population suffer from allergy against dust mites. It leads to expenditures and efforts in home life in order to make life more acceptable. New scientific discovery lets to use bacteria-probiotics to lower amount of dust mite in an easy, cheap and the most effective method.

Company specializing on microbiological cleaning has invented and developed innovative solution of the problem of allergy against dust mite. Even with the help of the most expensive and labour-intensive methods it is almost impossible to achieve full removal of dust mites. Therefore developed method is aimed not on the mites themselves, but on agents causing allergic reactions.

Let good bacteria make Your Job

Dust mite

In general true reason of the most often allergic reactions on dust mites are their excretions and saliva. Researches have revealed that specific group of bacteria-probiotics uses these „delicacies” as one’s food and immediately lower in such a way the amount of substances causing allergy (allergens). It leads directly to reducing the chance of allergic reaction.

3 seconds

At the moment the methods of fight with dust mite are often too expensive, labour-intensive and do not solve the assigned task. New developed method is much cheaper, more effective and especially safe for user. Bacteria-probiotics can be applied with the help of bottle with spray; simple use during 3 seconds is enough for control over the allergy against dust mite.

Though time is necessary to get accustomed, replacing bad beetles with their good competitors can be effective and stable solution of many problems.
